

CLAIMS:

1. A camera attached cellular terminal, comprising

a light receiving unit for visible light provided in addition to the camera;

5 wherein

the light receiving unit receives information from visible light.

2. The cellular terminal of Claim 1, wherein

the light receiving unit is set so as to point in the same direction as a lens of the

10 camera of the cellular terminal, and

communication through visible light is received when a device configured to
transmit information through visible light is portrayed in a display of the camera.
